

## How To Install Bouncy Bands® for Desks:

1. The Bouncy Band is packaged inside the support pipes. Pull it to remove it from the support pipes when you open the package. (Don't open the tabs on the support pipe.) Remove the temporary rubber bands from each end of the Bouncy Band from shipping.
2. Lift the front legs of the desk about 1" to slide the Bouncy Band up about 10". You should have to stretch the band to fit onto the second legs of the desk. This is good because you want it tightly secured. Bouncy Bands are made to fit on desks with legs 20-26" wide.
3. Place the support pipes in front of the desk legs on the floor. (The groove is on the top.) Then, lift the entire desk and insert the legs into the pipes as you lower the desk. This works better than leaning the desk backwards and the contents of the desk will then dump out.
4. Once the support pipes are in place on the legs of the desk, lower the Bouncy Band down to fit within the grooves at the top of each support pipe. This keeps the Bouncy Band securely in place.

Now students can enjoy bouncing their feet and stretching their legs while they work quietly at their desk! 😊

**Note:** Bouncy Bands are also available for Chairs.
